

Anjali:

When I grow up, I want to be a computer programmer. I want to have this career because I will have fun making programs. I will also earn lots of money and help children learn, have fun, and feel successful. First, I

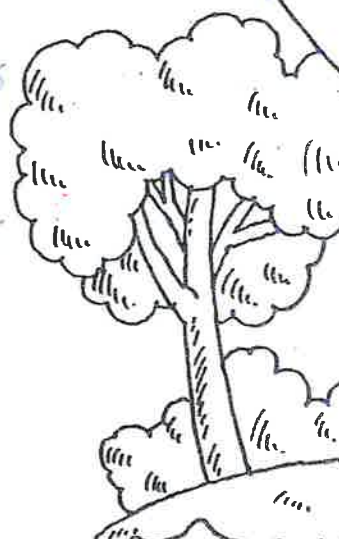

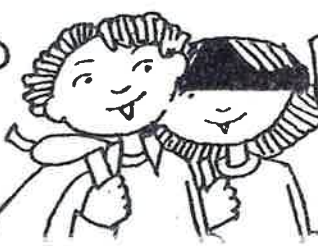

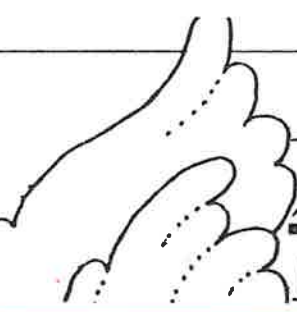

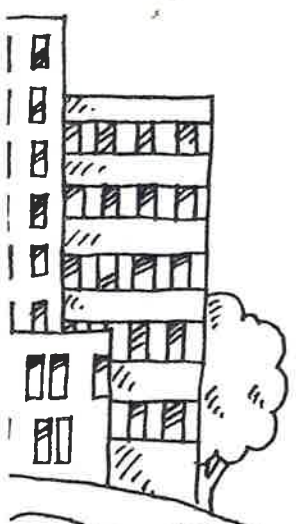

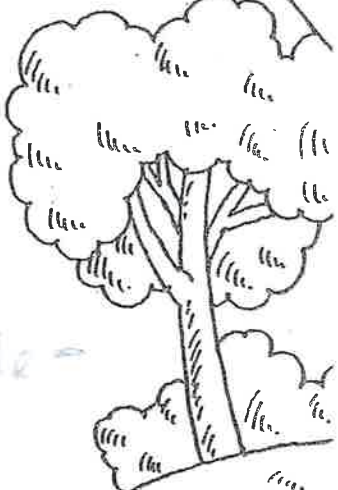

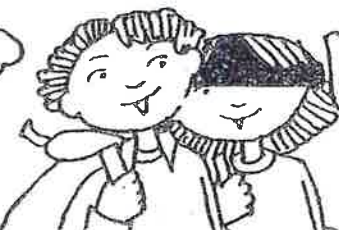

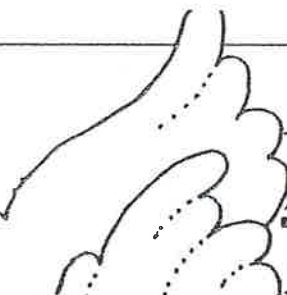

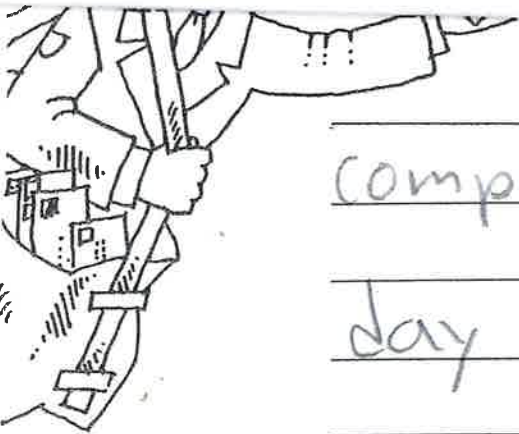

will need to get an education, in
other words, go to college or a
special school. You can go to any
university, but I think Stanford
is the best. There I will learn
things about computers and how
they work. I will learn that: com-

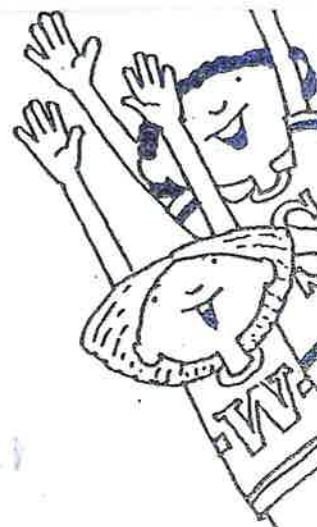

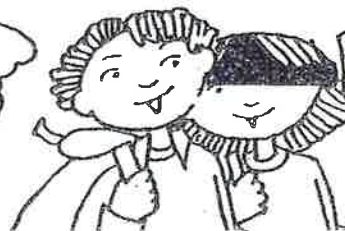

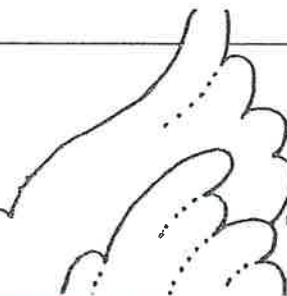

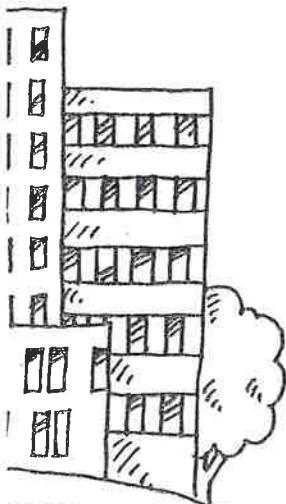

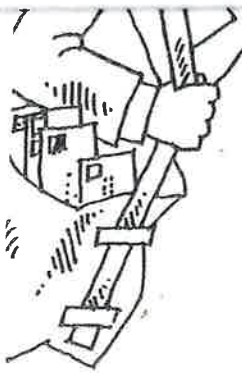

puters use ones and zeros to do every-
thing, and I will also learn about
position and orientation. I will also
learn about loops, which are things
that repeat forever, and about programs
which are a bunch of steps that
tell something what to do. A

computer programmer wears every-
day wear and the computer is
their only tool. I will use the
computer to make apps. My apps
will be games and learning apps such
as IXL, and Raz-kids and also Temple-
Run and Jetpack joyride. I can

practice programming when I'm young
too! I can go to Embark Labs
which teaches you a lot of computer
knowledge. I can go on scratch
which is a website where you can make
games but, it is very difficult. I think
I will be a good programmer because

I will practice every day and never
give up. I hope you want to be a
computer programmer when you grow
up!
